Subject: CEQA guidelines and invasive species

Hi,

I realize you may not be in a formal public comment period at this time, but I wanted to point out that the state's Strategic Framework on Invasive Species, as adopted in 2012 by secretaries of six state agencies, includes the recommendation below. If this has not already been incorporated into your process and there's still time, please do! Thanks, Doug

PE-10. Include invasive species prevention in CEQA compliance.

Some projects that require review under CEQA have the potential to spread invasive species into wildland or agricultural areas. Consideration of this potential effect should become a routine part of the CEQA review process by adding it to the Environmental Checklist Form in Appendix G of the CEQA Guidelines.
